

## FASTRACT :

A natural range of feed supplements which complete the circle from selection of quality genetics to the healthy adult animal.

All the products in the Fastract range are easy to administer, simple to use, economic and time saving.

### FASTRACT FOR:

- New born calves, foals, lambs, cria & kids
- Fresh calved cows/ heifers
- Any age when off colour or scoured
- Stress due to travelling, showing, weaning
- At antibiotic treatment / worming / dehorning
- When appetite is poor or challenged
- When greater feed intake or conversion is needed
- Good skin, coat and hoof condition

## EGGS-PORT

*"All our calves get Jump Start and their mothers Fastract Ruminant Paste at calving. We see a marked response in both, especially after difficult or assisted calving, with cows up and eating straight away. Fastract is simple to give, just inside the calf's mouth and for the cow even easier—we put it along the calf's back and she licks it off ! "*

*The benefits of feeding Fastract for just a few weeks carry on much longer -*

**EGGS-PORT** is a small privately run company with over 30 years commercial experience in the cattle industry.

Years of experience caring for valuable animals have resulted in the Fastract product range. Fastract is a unique, efficient and cost-effective formulation of selected beneficial bacteria, yeasts and vitamins working together to improve the health and wellbeing of your animals.

Any yeast in the diet is better than no yeast at all, but make no mistake, Fastract certainly does not fall into this category. Yeast enhances the digestibility of the fibre part of a diet, resulting in the release of more nutrients from it. Animals rely on a good population of beneficial gut bacteria to absorb nutrients; so no matter how much yeast is present, unless enough bacteria are also in the digestive system then maximum use of that diet will never be achieved.

A combination of specially selected strains of beneficial bacteria, yeast cultures and vitamins working together, Fastract improves diet digestibility and nutrient absorption. Added vitamins encourage energy metabolism, skin and hair quality, alongside immune system support. In Fastract Jump Start, specialised proteins further support the immune system of young animals.
